

Basalt - Tumbled

Basalt is an igneous (volcanic) rock formed from the rapid cooling of magnesium-rich and iron-rich lava exposed at or very near the earth's surface. Basalt is usually grey to black in colour with subtle patterns & is fine grained. Small holes throughout the stone are formed as the lava is cooled rapidly at the earth's surface. These holes are usually filled at the factory during fabrication or with grout or cement during installation. As Basalt weathers, the colours can show changes to brown or rust-red due to oxidation into rust of its iron-rich minerals. A tumbled finish is a flat, matt antique/old world look with irregular edges achieved during the tumbling/ageing process.

SIX SIDED - DIP SEALING - PRE-SEALING

A six sided sealing process will help to consolidate the surface plus minimise efflorescence, blotching from adhesive, mineral bloom, picture framing plus staining from handling, adhesives and grout during the installation. Also helps to make grouting cleanup easier.

PRODUCT	PACKAGING	MORE INFO	COATS	COVERAGE	BENEFITS
Ultra-Block			1	3 - 4m ²	<ul style="list-style-type: none"> Reduces Picture Framing and Efflorescence Minimises Staining from Adhesive and Grout Helps Consolidate Stone - UV Resistant - Low VOC Makes Grouting and Grout Clean Up Process Easier

NATURAL LOOK - PREMIUM STAIN PROTECTION

Best recommendation for a natural look and maximum stain resistance against oil, food, grease and grime. Ideal for residential, commercial, high traffic and also for food areas. Will also seal surrounding grout. Can also be used to pre-seal before installation.

GENERAL NOTE: These recommendations are intended as general guidelines for all available sealing options. Read product label, technical bulletin and SDS thoroughly prior to use. Always test first to determine number of coats and desired look. All coverages and suggested number of coats are approximate and only as a guide. Coverage will vary depending on surface density, porosity, texture and absorption. Also weather conditions, the application method and number of coats required. Sealers are not waterproofing agents and do not protect against etching by acid based contaminants or harsh chemicals. COVERAGE NOTE - Approximate per 1 litre per coat.
